Context

Let us all be aware,
That our natural resources are scarce.
To Mother Nature, let us not be cruel,
Let us reduce the use of coal and fossil fuel.

Together we are able and capable,
To move towards energy that is renewable.

Let us install more solar farm,
That will not do our nature any harm.

The Earth's global warming is giving us a warning,
The sea water level is rising and pollution is increasing.

**Ice on the Arctic is fast melting,
Adding to polar bear's suffering.**

This is a call to all for action,
For everyone to have this ambition.
That by 2030 we will at least half net carbon emission,
By ending deforestation and increasing plantation.

This will greatly help in nature's conservation,
Let us not have any reservation.

Promote sustainability with rationalization,
This will lead us all to a "Green Revolution".
